

A GLENCORE COMPANY

Visitor Handbook

MCARTHUR RIVER MINE

Document Author:	Site Training Coordinator	Reference No:	GEN-GEN-MAN-6040-0006
Issue No:	5	Revision No:	1
Approved by:	General Manager	Page No:	1 of 26

Visitor Checklist

You must complete the following **before** your visit to MRM:

- Complete our on-line induction before you visit. This is available at <http://www.mcarthurrivermine.com.au/EN/Pages/visitor-induction.aspx>
- Complete the following forms located at the back of this booklet:
 - Visitor Information
 - Medical Information
 - Visitor Induction Assessment
- Send your completed forms to your host
- Confirm your travel arrangements with your host well in advance of your visit
- Read this handbook and familiarise yourself with its contents.
- If you have a smart phone or tablet, download our MRM Community app. It is available on the iTunes and Google Play stores. Search for MRM Community.

Glencore Life Saving Behaviours

- Always come to work drug & Alcohol free.
- Always use or wear critical safety equipment.
- Always wear appropriate fall protection equipment when working above 2 metres.
- Only operate equipment if trained and authorised.
- Always isolate and “test for dead” prior to working on energy sources.
- Never modify or over-ride critical safety equipment prior to approval.
- Always seek and obtain clear approval before entering mobile equipment operating zones.
- Never enter danger zones.
- Always report injuries and HPRI’s.

Welcome

Welcome to McArthur River Mine, a zinc-lead and silver mine, which has been operating in the Gulf region of the Northern Territory since 1995. MRM is a Glencore company, one of the world's largest global diversified natural resource companies.

Located 900 km from Darwin and 65 km from the nearest township of Borroloola, we extract zinc, lead and silver ore through open pit mining, process it to concentrate form and transport the products by road to Bing Bong loading facility to begin the ocean voyage to export markets.

Mining

MRM is a conventional truck and excavator operation utilising bench mining methods to develop the stages of the open pit. The mining process begins by drilling rock then charging the holes with explosives to break it down to a size that can be handled by our mining fleet. Blasting can occur on any day at designated blast times, and notices are posted throughout the site to make you aware of the next blast time.

The ore bodies are defined by geologists, selectively mined and hauled to the ROM Pad for processing. The overburden, or waste rock, is taken to overburden emplacement facilities and ultimately rehabilitated.

Processing

Ore from the open pit mining operation is stockpiled on a Run-of-Mine (ROM) pad in separate piles according to ore type, with the ore ratio to be fed to the crusher established by our metallurgists.

The **crushing circuit** consists of a primary jaw crusher (Metso C160) and primary double deck screen followed by one secondary and two tertiary cone crushers (Metso HP5) in closed circuit with a second double deck. The crushed material (-14mm) is transferred to either the Heavy Medium Plant (HMP) feed stockpile or the 20,000 tonne surface stockpile, prior to entering the primary grinding circuit.

The **Heavy Medium Plant** uses ferrosilicon in slurry medium at a specific gravity of between 2.7 and 2.9 Kilos per Litre to separate liberated low density reject material (waste) from the ore via cycloning. The cycloned product is washed on screens to recover the Ferrosilicon. The upgraded ore is then conveyed to the surface stockpile and the rejects or waste is conveyed to the rejects pile ready for use as sheeting material for haul roads within the mine.

The primary **grinding circuit** is fed from the surface stockpile via two oscillating plate feeders and two belt feeders. The feed rate is controlled to provide the correct ratio of water and ore to feed the Semi-Autogenous Grinding Mill (SAG). The discharge of the SAG is screened and the -3mm material in slurry form is fed to the Ball Mill. The Ball Mill discharge is pumped to a cluster of cyclones for sizing. The fine particles of around 50 micron report to the flotation circuit whilst the coarse underflow of the cyclone reports back to the Ball Mill to be reground.

The primary **flotation stage** is call the Rougher and the concentrate that is produced from this stage progresses through to the Regrind Milling Circuit and Cleaning Flotation Circuits to eventually be upgraded to become a saleable concentrate. Froth pumps and hoppers located under the flotation circuit pump concentrates to their next stage. An in-stream analyser measures the zinc, lead, iron and percentage solids to monitor and control the flotation circuit. The reagents used in the flotation process are Frother, Copper Sulphate, Xanthate and Baymin

Traditionally, MRM only produced a bulk Zinc (Zn) Lead (Pb) concentrate but recent development of a new separation process has enabled MRM to produce separate Pb and Zn concentrates providing material for different markets. The new process is called **PBOX** and it utilises the rapid oxidation rate of fine lead mineral (galena) that supports the further separation of the Zinc mineral (sphalerite) thus producing two concentrates from the original Bulk Concentrate. The reagents used in this process are Sulphuric Acid and Compressed Air.

Transport

Our concentrate products are trucked from the mine to the loading facility at Bing Bong, 120km north on the Gulf of Carpentaria. Our contract fleet of road-trains have fully covered side-tipping trailers and they take the concentrates to a storage shed at Bing Bong. Inside the concentrate shed, a front-end loader moves concentrate to feeders on a fully enclosed conveying system which loads directly onto the barge, the *MV Aburri*. There is no deep water access at Bing Bong, so the barge transports concentrate to bulk carriers waiting within an offshore transfer zone at sea.

Important requirements before you visit

Before you can visit or stay at MRM, you need to undergo an induction so you understand our safety rules and procedures as well as other important aspects of our operations. Our induction program includes three parts:

- View our Visitor Induction Video on our website at www.mcarthurrivermine.com.au/induction
- Complete the forms included at the back of this handbook
- Send your completed forms to your host so your travel can be booked.

This handbook provides you with general information about our site and facilities as well as what to expect when you arrive, particularly if you are staying overnight in our village.

Every visitor is assigned a host, who will take responsibility for your travel arrangements as well as your safety on site. Make sure you know the name of your host and confirm your arrangements with them.

Travel and arrival

Your flight out of Darwin

Direct flights operate between Darwin and McArthur River operated by Airnorth with a flight time of approximately one hour.

- You will need to check in at Airnorth at Darwin International Airport one hour before your flight is due to depart. Check in closes 30 minutes prior to departure.
- Photo identification will be required for your flight.
- You need to advise us if you require more than one piece of checked luggage.
- Check-in and hand luggage weight limits exist on both the Embraer E170 and Brasilia E120 aircraft; check before you arrive at check-in.
- Meals are not served on the plane but will be available at MRM once you arrive.
- If you are unable to make your flight for any reason, contact your host.

Arrival at McArthur River

On arrival into McArthur River you will be met by your host, who will complete your induction process.

- All visitors must be signed in at reception and given a visitor's identification tag which must be worn at all times, except in the village.
- You must be accompanied by your host whenever you are outside the village or administration areas.
- Your host is responsible for your safety and is there to provide direction and help. Please follow their instructions at all times.

If you arrive on a morning flight, you will travel to the village dining room where you can eat breakfast and prepare your lunch for the day. From there you will be taken to reception where you will be signed in and issued a visitor pass.

If you arrive on an evening flight, your host will provide you with a short talk to familiarise you with the village area and issue you with your room key. Dinner is available in the dry mess.

Policies and procedures

As a visitor, you must follow site rules and procedures which govern environmental protection, cultural heritage management, health and safety. You may also be seen as a representative of our site if you are in contact with our Gulf regional community.

The rules governing the conduct of everyone on site are based on Work Health and Safety legislation, mining management legislation and company policy statements. Copies of these materials are available at reception and on noticeboards around site. The key things you need to know are summarised in this handbook as well as the online Visitor Induction Video.

Environment

MRM is committed to responsible environmental management and all employees, contractors and visitors are required to comply with the associated processes. Our aim is to preserve the long-term health, function and viability of the natural environment where we operate.

The MRM environment is generally open woodland with areas of riverine forest. Two waterways - the McArthur River and Barney Creek – encircle the open pit below a bund wall. This prevents floodwater from entering the pit.

Water management is one of our highest priorities at MRM. Both inflows from ground water and surface water are managed on site through a closed system to ensure no water is discharged to the surrounding waterways except under approved conditions.

The health of the birds, fishes and plant life around the McArthur River system both at the site and downstream is important for both the natural environment and the Aboriginal communities who rely on it. Biodiversity and marine surveys are undertaken annually on and near the mine site, around the coast at Bing Bong and further out to sea at the Sir Edward Pellew Islands. Our monitoring program includes studies of birds, fish, oysters, sea grass, macro invertebrates, seafloor and beach sediments, seawater and riverine ecosystems.

MRM has waste management plans designed to reduce, re-use, recycle or responsibly dispose of waste. Facilities are provided to allow for the recycling of oil, steel, batteries and aluminium. Non-recyclable rubbish is disposed of on site. Keeping dust to a minimum protects air quality for our people and the surrounding environment, particularly during the dry season. Water carts are used on roads and dusty areas while air filters have been installed where possible, such as at the concentrate shed at Bing Bong. Dust monitoring is in place across the site.

In line with these initiatives:

- Do not interfere with any valves, controls or equipment unless under strict instruction;
- Ensure all vehicles and equipment is washed before leaving the MRM or Bing Bong sites. Wheel washes are in place for all vehicles;
- Follow all vehicle speed conditions to help manage dust;
- Do not disturb any flora or fauna;
- Only dispose of rubbish in designated areas and use waste recycling facilities where available; and
- Fishing is strictly prohibited anywhere on the MRM site.

Cultural heritage management

There are 17 sites of cultural significance on our site that either have a direct link to dreamtime stories or are important to the history and culture of the local Aboriginal people. We respect local customs and values and require all visitors to do the same.

Sacred and significant sites are registered with the Aboriginal Areas Protection Authority and are protected under legislation. For further protection, we require any clearing anywhere on site to be formally approved, regardless of whether or not it is adjacent to a registered sacred site.

All sites at MRM are signposted and fenced to protect accidental entry.

- Do not enter protected sites under any circumstances;
- Follow any instructions given by your host with regard to protected sites; and
- There are severe legal penalties and fines for anyone interfering with cultural heritage.

Community

While MRM is a remote site, we are a member of the Gulf regional community. This area of 147,000 square kilometres stretches from the base of the Gulf of Carpentaria south to Brunette Downs and from Mataranka east to the Queensland border.

As a member of this community, we have built strong relationships with our neighbours on the basis of respect, mutual benefits and effective engagement.

We value our relationships with the traditional owners of the four Aboriginal language groups who reside in the Gulf region.

By hiring and buying locally and through programs like the MRM Community Benefits Trust and annual sponsorships and donations, we have contributed to the development of infrastructure, services and opportunities within the region.

Our community relations team is the key point of contact between the mine and the community. Each year, we undertake programs that inform our stakeholders about our operations, respond to their questions or concerns, consult on matters where their input is sought and partner with local organisations and committees.

Any visitors to site who attend events or meetings in the region should be aware they may be regarded as representatives of the mine.

- Be polite and respectful of community members
- Be receptive to community members who ask questions about your work
- Ask the name of anyone asking you questions about MRM operations that need a response and pass these details to the MRM community relations team
- Be conscious of commercially sensitive or confidential information that should not be shared outside operations
- Do not speak on behalf of the mine.

Native title has been determined over much of Borroloola. Photographs must not be taken without permission and some areas of the community are not accessible.

Health and Safety

As part of our health and safety culture on site, every individual is responsible for their own personal safety and to act in a way that does not create a health and safety risk for anyone working around them. We are committed to providing a safe, injury free workplace and to ensuring all our people, including visitors, go home in the same state of health that they arrived.

Personal Protective Equipment

The correct personal protective equipment, or PPE, must be worn at all times when in operational areas or as signposted.

- The minimum standard of dress in administration areas is long trousers, a collared shirt and enclosed footwear.
- The minimum requirement in all operational areas includes high visibility cotton-based clothing, a hard hat, safety glasses, safety boots and gloves. Respirators must be carried in operational areas.
- In some areas, additional PPE must be worn. If you need to enter these areas, your host will provide you with the necessary equipment and instruct you in its use.

Alcohol and drugs

The Alcohol and Drug Procedure is in place to protect the safety of our workforce.

No-one is permitted to enter our site under the influence of alcohol or drugs. Everyone entering our sites must submit to compulsory daily alcohol breath testing.

- Possession and consumption of alcohol outside of designated areas is strictly prohibited.
- Possession of drugs anywhere on site is also prohibited. Random drug testing is conducted with our workforce and visitors alike.
- If you are required to submit to a random drug test, your name will be posted on the list located adjacent to the exit door at the village dining room.

Mobile equipment

A wide range of mobile equipment is used on site ranging from light vehicles through to heavy earth moving equipment.

- If you are on foot around any of these vehicles you must stay out of their path until you get the operator's attention.
- Never assume the operator has seen you. Operators of mobile equipment can have poor visibility and blind spots.

Driving

- Visitors are not permitted to drive on site or operate plant or equipment.
- Ensure your seatbelt is worn at all times.
- Keep vehicle windows closed when driving in operational areas to help stop dust and heat from getting inside.

Hazardous substances

- Hazardous substances used and stored on our site include fuels and oils, chemicals, reagents and explosives.
- Signs indicating restricted access to these areas are in place.

Hygiene

Because the MRM orebody is rich in lead, personal hygiene is very important to prevent any impact on your health.

- After working in or visiting operational areas, you must shower or change before leaving the site or returning to the village.
- Towels and clothing bins for site uniforms are provided in the change rooms.
- Clothes are washed and returned to designated points as arranged by your host.
- Contaminated work clothing must not be washed in the village washing machines.

Drinking water

- Not all water on site is fit for drinking.
- Only drink from designated outlets signposted 'Potable Water', such as water coolers.

Staying in our village

If you are staying with us overnight, your host will guide you to the village catering office where you will be given your room key.

The Village is a designated clean area. Unless you are working in the Village area, you are not permitted to enter the Village in work clothes.

Your room

The majority of our rooms are motel style with en-suite facilities, satellite digital television and a refrigerator. There are also some barrack style rooms, which have shared bathroom and laundry facilities. All accommodation is fully air-conditioned.

- Your room is equipped with linen and towels
- You will need to bring all toiletries, including soap
- In your room you will find a copy of the village evacuation plan, which will give the location of your room relative to the village landmarks and the emergency evacuation muster point.
- The village evacuation muster point is located adjacent to the volleyball courts. If you are unsure of its location, ask your host
- If maintenance is required in your room, you can report it by completing a maintenance request form located in the dining room
- You are advised to lock your room when leaving it unoccupied
- When leaving site, your room key should be returned to the accommodation office.

Mess facilities

The mess, or dining room, is open for meals at the following times:

- Breakfast – 4.15am to 7.30am
- Dinner – 4.15pm to 8pm.

Mess facilities are also available for a short period in the mornings following the arrival of incoming flights.

- You must prepare your own lunch during breakfast or dinner times as the mess is not open for lunch.
- Well-equipped crib, or lunch rooms, are available at most work locations and include water, coffee and tea supplies as well as basic food preparation areas. Microwave ovens, toasters and refrigerators are also available.
- You must be reasonably dressed in the dining area.
- Soiled work clothing and dirty footwear must not be worn.
- Thongs are acceptable footwear.
- Singlets are not allowed in the dining room.

Our wet mess is open from 6.30am to 8am and from 6pm to 8.30pm.

- Our wet mess operates a Responsible Service of Alcohol policy.
- A selection of refreshments includes soft drinks, a range of beers, pre-mixed drinks, wine and cider.

The wet mess includes a small shop.

- Toiletries, phone cards, stamps, snacks, drinks and other general items can also be purchased during wet mess hours and also between 5pm and 5.15pm daily.
- EFTPOS is available but there is no ATM.

Other facilities

Everyone staying in the village enjoys access to an excellent range of sporting, social and recreational facilities.

- A partially shaded swimming pool, tennis, basketball and volleyball courts and a cricket pitch are located near to the wet mess. Sporting equipment can be borrowed from the wet mess and you can make a booking for the tennis court there also.
- Our well-equipped gymnasium is open 24 hours a day.
- A movie theatre featuring the latest releases and classics is located in the wet mess, along with pool tables and dart boards.
- A number of social and special interest clubs are supported by staff including the Social Club, Clay Target Shooting Club, and Fishing Club. .
- Internet access is available in the 24-hour crib room adjacent to the wet mess.
- Laundries are located throughout the village for free use by everyone on site. Please remember you **MUST NOT** use village laundries for soiled or contaminated work clothing.
- Public telephones are located adjacent to the wet mess as well as the contractors' car park.
- Mobile telephone reception is available via Telstra

Getting around

A bus runs services between the village and the mine site.

- Bus timetables are posted throughout the site.
- **From the airport:** The bus leaves after luggage is collected from the trolley.
- **To the airport:** The bus leaves from both the mine site change house and the wet mess. The last bus leaves from both locations 40 minutes prior to the scheduled departure time of the flight.
- **Between site and the village:** On most days, the bus runs a continuous loop from 5.25am to 7am and again from 5.25pm to 7.10pm. Friday, Saturday and Sunday evenings the loop stops at 6.40pm in the evening.

The pick up and drop off points are:

- The wet mess car park
- The rocks at the driveway to the contractors' accommodation
- Next to the volleyball courts, and
- Outside the mine site change house.

It is an easy 2km walk from the village to site, and many people use the opportunity to gain additional exercise.

- If you choose to walk, you must wear high visibility, reflective clothing and a high-vis vest **OVER** the top of any backpack;
- At night or early morning you **MUST** have a lit torch;
- Walk on the road in the opposite direction to oncoming traffic; and
- It is also a short walk between the airport and the village on a separate pathway

Climate and temperature

McArthur River Mine is located in a wet-dry tropical climate. The wet season, from November to April, is characterised by warm humid days and nights, tropical storms and monsoonal rain at times. The dry season, from May to October, brings cool to cold nights and generally warm days.

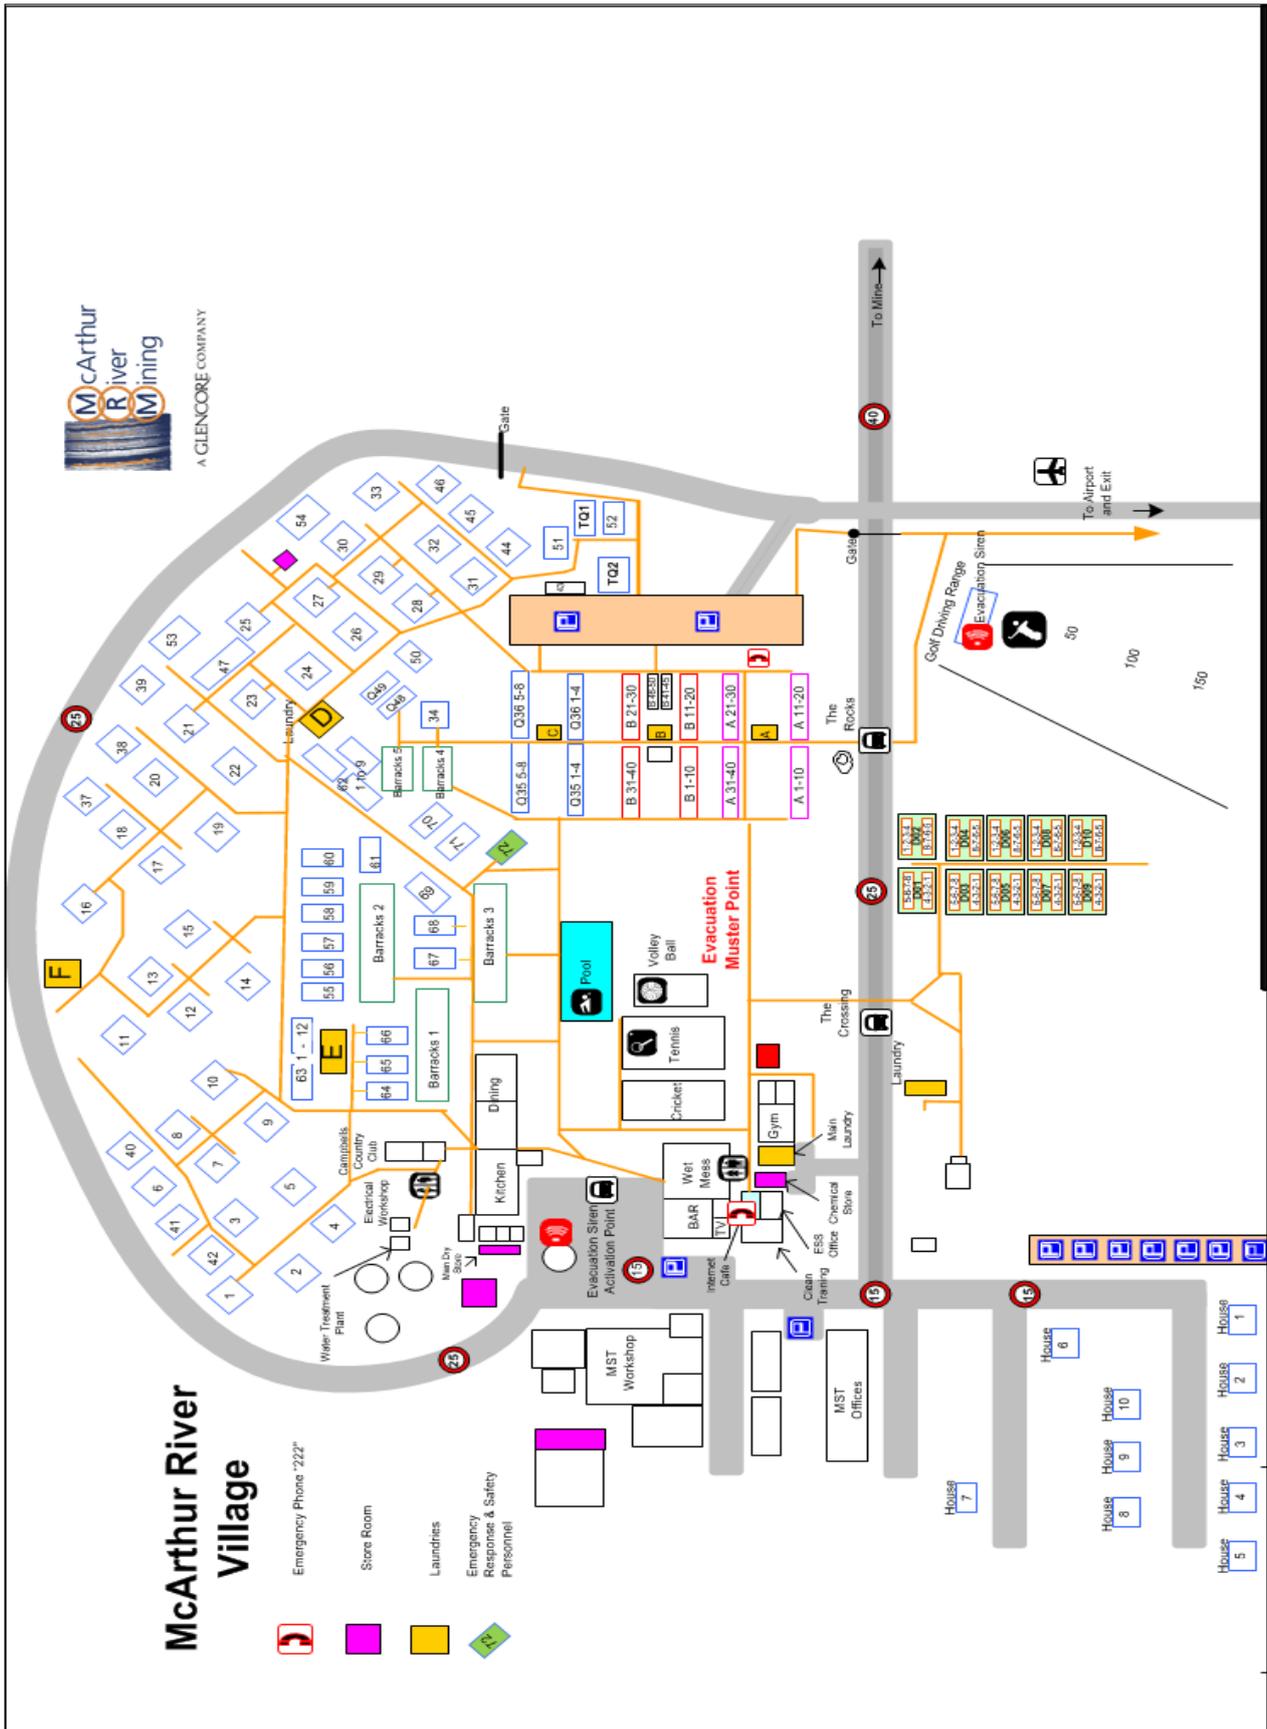

- Dry season mornings can be very chilly. It is advisable to pack a jumper or jacket
- In the wet season, it is advisable to bring a raincoat or umbrella.

Wildlife

A wide variety of wildlife inhabits the village area. Do not approach or feed the animals.

In the warmer months, snakes are often seen within the village area. Make sure to walk only on the foot paths and report snake sightings to your host. We have a number of employees trained in the identification and removal of dangerous snakes.

Village map

Emergencies, evacuation and protection

Our Emergency Response Team is equipped and trained to handle all emergencies. Emergencies must be reported immediately in one of the following ways:

- Notify site personnel
- Call 222 from any company phone, or
- Call 8975 8222 from any other phone, including mobiles.
- Two emergency phones are located in the village.
 - One on the wall next to the wet mess
 - One adjacent to the phone booth near the village boom gate.

Evacuation assembly points

Evacuation assembly points are located around the site and will be shown to you by your host. Should an emergency arise, your host or other staff will guide you to one of these points. Once there, follow the directions of staff.

In the accommodation village the evacuation point is located adjacent to the volleyball courts. You must remain at the evacuation point until told it is okay to leave.

First aid

The MRM First Aid Centre is located behind the Training Centre building. It is staffed by paramedics from 6am to 6.15pm every day. The paramedics are on-call after hours for serious injuries and emergencies. If you receive any injury, including electric shock, you must report it immediately to your host. Regardless of how minor the injury, you will need to go to the First Aid Centre for assessment and monitoring.

Fire protection

Comprehensive fire protection systems are in place including fire suppressors, hoses and extinguishers. Do not use this equipment unless you have had specific training in their use.

Incident and hazard reporting

All safety and environmental incidents must be reported to your host and the appropriate incident report form completed.

Tagging and barricading

You may see a range of tags on equipment and barricades around site. Tags are designed to protect people and equipment and include important information that you should read. Do not remove tags or attempt to operate any equipment that has been tagged. If you come across barricading or caution tape, stay outside the area and obey all signs in place. If you are unsure about a hazard, talk to your host.

Other important information

Communication

- Communication systems on site include telephone and 2-way radio. You must not operate this equipment without permission from your host except in an emergency
- Mobile phone coverage is available via the Telstra network only.

Smoking

Smoking is not permitted in any of the following areas:

- Inside buildings and vehicles
- In any area designated as 'Lead Process' or 'Lead Risk'
- Within ten metres of explosives and magazines
- Inside fuel and chemical storage areas
- At evacuation or muster points
- In any designated 'No Smoking Area'
- Currently, electronic cigarettes are deemed the same as cigarettes, therefore the same rules apply
- If you are unsure about where you can smoke, ask your host.

Photography

- Photography is not permitted in any operational area without the express permission of site management
- You must not share photographs or video taken on site through social media or any other means
- Respect the privacy of other visitors and staff and remember that all areas on site, including the village, are private property.

Airport

McArthur River Mine Airport is controlled under the Civil Aviation Safety Authority. Please follow signs and instructions given to you by airport staff.

Assessment form

You must complete this assessment to demonstrate you have understood the information provided in this booklet. Failure to do so may result in access to site being denied.

You must report an accident or near miss to your host:

- No matter how minor
- Only if it is serious
- Only if there is an injury
- If it involves damage to equipment

Who may be required to undergo alcohol and/ or drug testing?

- Only employees
- Contractors
- Visitors
- All of the above

In the event of an emergency on site that requires evacuation:

- Run to the security gate
- Proceed to the airport muster point
- Staff will guide you to the evacuation point
- Go to the Mill control room

In the case of emergency, use a MRM phone to dial what number?

- 000
- 222
- 999
- 333

Should you need to use the communication equipment, you must:

- Check it is not being used
- Obtain permission from your host
- Get instructions on how to use it
- Keep a record of your conversation

When entering operational areas, visitors should be accompanied by their host:

- In hazardous areas
- Whenever on foot
- At all times
- Until this induction has been completed

If there is an evacuation in the accommodation village, you should:

- Take the first available bus to site
- Go to the emergency evacuation point adjacent to the volleyball courts
- Proceed to the wet mess
- Contact your host for directions

At McArthur River Mine, the First Aid Centre is located:

- Behind the Training Centre
- In the main plant area
- Next to the site office
- In the village

To notify of an emergency you should:

- Run to the nearest evacuation point
- Ring 000
- Contact any staff member or phone 222
- Stay where you are until found

No smoking policy:

- Smoking is not permitted in buildings
- Smoking is not permitted in vehicles
- Ask your host where smoking is permitted
- All of the above

When outside a vehicle in operational areas, all visitors must wear:

- Hard hat
- Safety glasses
- Safety boots
- All of the above

On both site and in the village, you should only drink water that:

- Comes from a tap
- Is signposted 'Potable Water'
- Comes from the village
- Is bottled

I acknowledge that I understand the contents of this induction and the answers in this assessment are my own.
